

TECHNICAL FIX REPORT

Team Name Front Chest Placement

Response to Michael Baptiste's June 18 test: the team name was appearing on the back instead of the front.

Bottom line

Fix verified locally on June 18: Michael's exact prompt now adds an editable 'Team Name: MICHAEL' layer on the front chest after AI generation. The back torso is no longer used for the team name.

What Michael Reported

Client feedback

"Its great, however the name went on the back of the jersey for that model."

Prompt used in the test

Make a jersey about Michael Jackson, and show him doing the moonwalk. Also, please put the team name Michael on the front. Also, please add space and stars to the background to make it look epic.

The prompt clearly asked for the team name on the front. The generated design looked great overall, but MICHAEL appeared across the upper back instead of the chest.

Evidence From Michael's Test

These screenshots are from the live test on besu-customs.vercel.app.

Step 2 AI Design with the Michael Jackson prompt entered before generation.

Front view after generation: moonwalk graphic and space theme worked, but no team name on the chest.

Back view: MICHAEL was rendered on the back torso instead of the front chest.

Local Re-Test After Fix

Live verification on localhost:3000

The same Michael Jackson prompt was run locally on Basketball Jersey using Flash generation. The app detected the team name, generated the texture, and automatically added the Team Name layer on the front chest.

After fix: AI generation completed and 'Team Name: MICHAEL' layer was added automatically.

After fix — front view (Review step, view locked): team name appears on the front chest.

Team Name: MIC...

After fix — back view (Review step, view locked): no MICHAEL name baked onto the back torso.

Before vs After Summary

Check	Before fix (production test)	After fix (local re-test)
Prompt parsing	'put the team name Michael on the front' not recognized	Recognized → MICHAEL
Team name placement	MICHAEL rendered on back by AI	Editable Team Name layer on front chest
Front chest	No team name visible	MICHAEL visible on front
Back torso	MICHAEL incorrectly on back	No baked team name on back
Toast confirmation	AI Pattern added only	AI pattern and team name added successfully

Root Cause

The app already had front-chest team name logic, but it only recognized formal phrases like 'team name is Michael' or 'team called Michael'. Michael's natural wording — 'put the team name Michael on the front' — was not parsed.

Step	What happened before the fix
1. Prompt parsing	Team name was not detected from the prompt.
2. AI instructions	No front-chest guardrail was applied; the model followed generic jersey conventions.
3. Compositor layer	No automatic front chest text layer was added.
4. AI output	Gemini placed MICHAEL on the back like a player name.

Fix Applied

- Expanded team-name detection to understand 'put/place/add the team name X on the front' and 'team name X on the front'.
- When a team name is detected, the AI is told to keep all panels typography-free.
- The app adds one editable 'Team Name' text layer on the front chest after generation (deterministic placement, not left to the AI).
- This prevents misspelled AI text and guarantees front-chest placement for Bryant's expected workflow.

File	Change
lib/team-text-placement.ts	New prompt patterns for natural front-placement phrasing.
components/ai-texture-generator.tsx	When team name is detected, AI skips typography; compositor handles chest wordmark.

Local Verification (June 18)

Automated test result

All 6 of 6 prompt extraction cases passed locally, including Michael's exact test prompt. Guardrail check confirms AI skips typography when team name is detected.

Extraction test matrix

Test case	Expected	Detected	Result
Michael Baptiste test prompt (Jun 18)	Michael	MICHAEL	PASS
team name is Lakers	Lakers	LAKERS	PASS
team name Lakers on the front	Lakers	LAKERS	PASS
put the team name Bulls on the front	Bulls	BULLS	PASS
team called the Galactic	Galactic	GALACTIC	PASS
no team name (should not extract)	(none)	(none)	PASS

Live browser test steps

Step	Result
Load app	localhost:3000 opened
Select product	Basketball Jersey selected
Open step	AI Design step active
UV ready	Texture generation unlocked
Screenshot	04-local-prompt-ready.png
Generate	Flash generation started
Generation	Completed with team name layer
Assert team layer	present
Screenshot	05-local-after-generated.png (post-generation, AI step)
Open step	Review step for front/back view lock
Screenshot	06-local-after-front.png
Screenshot	07-local-after-back.png

Michael prompt → front chest layer

Field	Value
Extracted team name	Michael → MICHAEL
Layer name	Team Name: MICHAEL
Chest UV position	[0.5, 0.25, 0]
Placement meaning	Center front chest on basketball jersey UV map — not the back panel.

TypeScript check

pnpm exec tsc --noEmit completed with no errors after the fix.

What to expect on re-test

- Use the same Michael Jackson prompt in Step 2: AI Design.
- The AI texture should show the theme/graphics only — no MICHAEL text baked into the back.
- After generation, an editable 'Team Name: MICHAEL' layer appears on the front chest.
- The name can still be resized, recolored, or repositioned in the Text step.

Ready to send

This fix is verified locally. Deploy to production so Michael and Bryant can rerun the same prompt on besu-customs.vercel.app.
