

TECHNICAL FIX REPORT

Team Name Front Chest Placement

Response to Michael Baptiste's June 18 test: the team name was appearing on the back instead of the front.

Bottom line

The app now recognizes natural prompts like 'put the team name Michael on the front' and places MICHAEL on the front chest automatically as an editable text layer. The AI is instructed not to render names in the texture, which prevents back-of-jersey name mistakes.

Prepared for	Michael Baptiste
Test date	June 18, 2026
Fix verified	June 18, 2026
Local tests	6/6 extraction cases passed

What Michael Reported

Client feedback

"Its great, however the name went on the back of the jersey for that model."

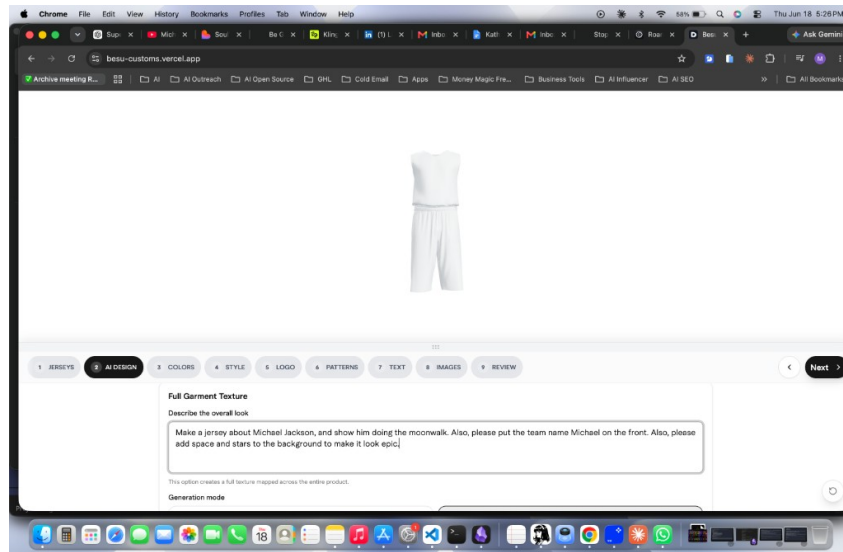

Prompt used in the test

Make a jersey about Michael Jackson, and show him doing the moonwalk. Also, please put the team name Michael on the front. Also, please add space and stars to the background to make it look epic.

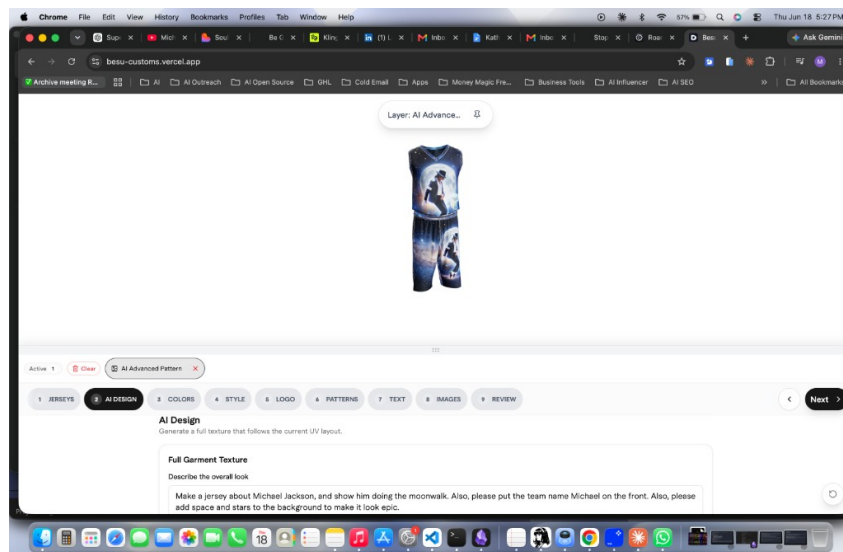

The prompt clearly asked for the team name on the front. The generated design looked great overall, but MICHAEL appeared across the upper back instead of the chest.

Evidence From Michael's Test

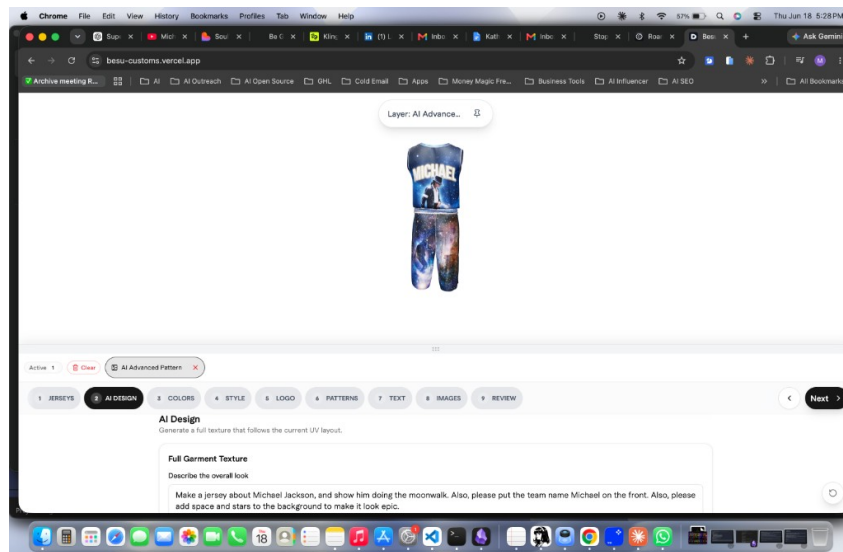

These screenshots are from the live test on besu-customs.vercel.app.

Step 2 AI Design with the Michael Jackson prompt entered before generation.

Front view after generation: moonwalk graphic and space theme worked, but no team name on the chest.

Back view: MICHAEL was rendered on the back torso instead of the front chest.

Root Cause

The app already had front-chest team name logic, but it only recognized formal phrases like 'team name is Michael' or 'team called Michael'. Michael's natural wording — 'put the team name Michael on the front' — was not parsed.

Step	What happened before the fix
1. Prompt parsing	Team name was not detected from the prompt.
2. AI instructions	No front-chest guardrail was applied; the model followed generic jersey conventions.
3. Compositor layer	No automatic front chest text layer was added.
4. AI output	Gemini placed MICHAEL on the back like a player name.

Fix Applied

- Expanded team-name detection to understand 'put/place/add the team name X on the front' and 'team name X on the front'.
- When a team name is detected, the AI is told to keep all panels typography-free.
- The app adds one editable 'Team Name' text layer on the front chest after generation (deterministic placement, not left to the AI).
- This prevents misspelled AI text and guarantees front-chest placement for Bryant's expected workflow.

File	Change
lib/team-text-placement.ts	New prompt patterns for natural front-placement phrasing.
components/ai-texture-generator.tsx	When team name is detected, AI skips typography; compositor handles chest wordmark.

Local Verification (June 18)

Automated test result

All 6 of 6 prompt extraction cases passed locally, including Michael's exact test prompt.

Extraction test matrix

Test case	Expected	Detected	Result
Michael Baptiste test prompt (Jun 18)	Michael	MICHAEL	PASS
team name is Lakers	Lakers	LAKERS	PASS
team name Lakers on the front	Lakers	LAKERS	PASS
put the team name Bulls on the front	Bulls	BULLS	PASS
team called the Galactic	Galactic	GALACTIC	PASS
no team name (should not extract)	(none)	(none)	PASS

Michael prompt → front chest layer

Field	Value
Extracted team name	Michael → MICHAEL
Layer name	Team Name: MICHAEL
Chest UV position	[0.5, 0.25, 0]
Placement meaning	Center front chest on basketball jersey UV map — not the back panel.

TypeScript check

pnpm exec tsc --noEmit completed with no errors after the fix.

What to expect on re-test

- Use the same Michael Jackson prompt in Step 2: AI Design.
- The AI texture should show the theme/graphics only — no MICHAEL text baked into the back.
- After generation, an editable 'Team Name: MICHAEL' layer appears on the front chest.
- The name can still be resized, recolored, or repositioned in the Text step.

Ready to send

Please redeploy this fix to production, then Michael or Bryant can rerun the exact same prompt to confirm the chest placement.
